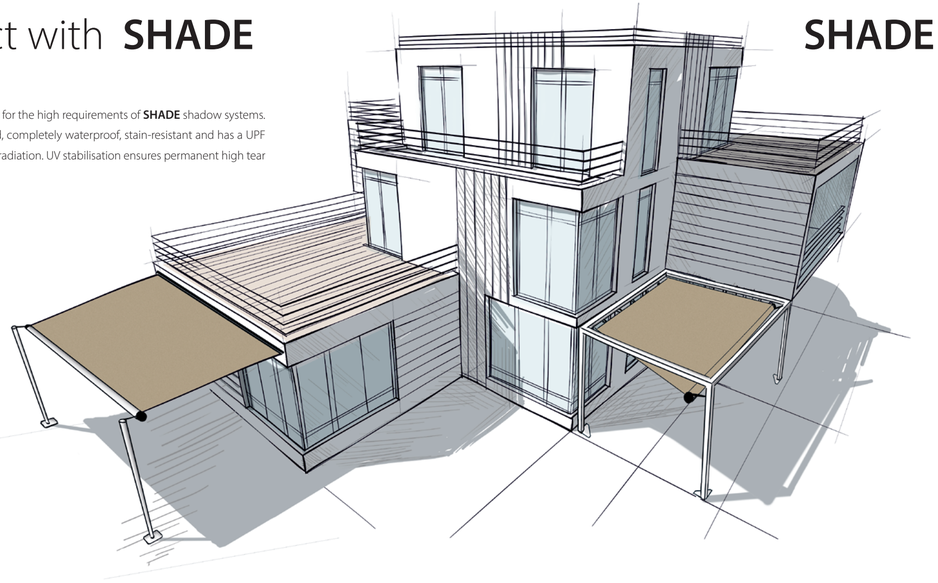
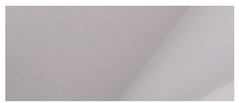
In close contact with **SHADE**

The **SHADE** sail membrane was specially developed for the high requirements of **SHADE** shadow systems. The fabric is very light, mould resistant impregnated, completely waterproof, stain-resistant and has a UPF value of 50+ for high protection against harmful UV radiation. UV stabilisation ensures permanent high tear resistance and rich colours.



By rolling up the canvas a more or less pronounced leaf structure can occur in the cloth. This has no influence on the function and quality of the fabric. The leaf structure effect diminishes after a short period of strong sun exposure.



White / similar to RAL 9003

Beige / similar to RAL 1015

Sand / similar to RAL 1019

Grey / similar to RAL 7042

SHADESIGN®

Passion for shade

SHADE just the way you want it

In addition to the different application possibilities and the different fabric colours of the **SHADE** shadow systems, fine-structure colour coatings (white aluminium, white & anthracite) are available for many of the individual components as a further customisation option. Your **SHADE** shadow system fits perfectly into your home. Inconspicuous or as a visual highlight. Just the way you want it.

SHADESIGN®

Passion for shade

V2024.01

The shading system of the future

SHADESIGN develops innovative sun protection solutions of the highest design and quality level. Our patented **SHADE** shadow systems have become the third standard product alongside long-serving awnings and classic parasols.

CE certified product
(DIN EN 13561: 2009-01)

Applicable all year round

High UV protection UPF 50+

Wind dynamic through free-floating suspension
(Wind resistance class 3 tested according to DIN EN 13561: 2009-01)

Can be used in the rain, self-draining from an inclination of approximately 8 degrees
(Resistance to water accumulation class 2 according to DIN EN 13561)

Awnings were yesterday

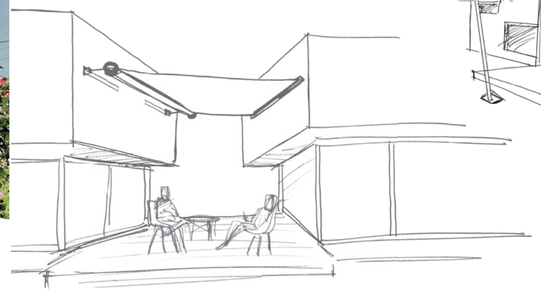
SHADE fits into any building architecture and, with its minimalist design and free-floating sail membrane, is a visual highlight on every façade. The system enables a total sail area of a remarkable 36 m² and offers an unbelievable price/performance ratio compared to awnings and fixed sun sails. Make the comparison!

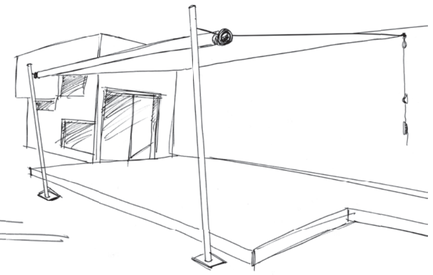
SHADE at a glance

- Can be installed on almost any façade (e.g. also on sensitive façades of prefabricated houses)
- Extremely good self-cleaning power of the sail membrane
- Patented winding system minimizes accumulation of dirt
- Effortless rolling up and down
- Also available as a motorized version
- Optimal rain protection through waterproof membrane
- Reduced water pocket formation through self-draining Membrane suspension from an inclination of approximately 8 degrees
- Little installation effort
- Also ideal for under glass designs
- Width & projection up to 600 cm

One system, many options

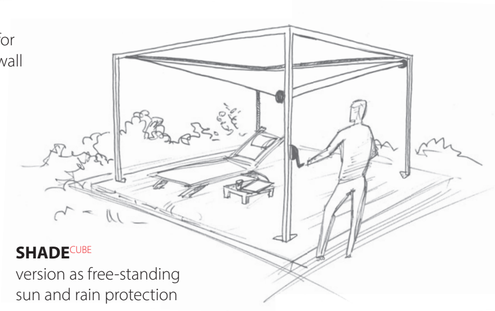
Whether terrace, patio, roof garden, outdoor dining area, balcony, pool shading or courtyard covering - thanks to the modular structure, almost any desired area can be shaded with **SHADE** shadow systems. Almost every challenge can be solved with an extensive range of systems and accessories.



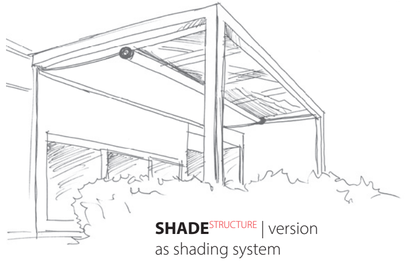


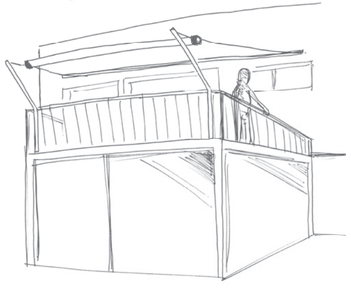
SHADEINOX | version for terraces and large areas

SHADESTRUCTURE | version for wall-to-wall bracing



SHADECUBE
version as free-standing sun and rain protection



SHADESTRUCTURE | version as shading system for solutions under glass


SHADEINOX
version for railings and balconies
